health

UrologyHub gives fast access to expert urologists and diagnostic services – bringing together leading national experts and providers in an easy-to-access service for both insured and self pay private patients.

UrologyHub provides a single point of referral for anyone who is symptomatic or concerned and requires a consultation or diagnostic assessment for problems related to the urinary tract or male reproductive system. Our aim is to provide patients access to a urologist with an appropriate specialism together with any required diagnostic investigations on the same day. Further investigations and treatment will be seamlessly delivered through pre-existing pathways.

Our clinics are located in state-of-the-art specialist outpatient centres with access to a full multidisciplinary team for a fast and professional urology service.

UrologyHub is underpinned by the UK's leading private cancer network, GenesisCare, which provides a clear and comprehensive pathway for patients with a cancer diagnosis who choose private treatment.

## UrologyHub

---

# Rapid access diagnostics and clinics

UrologyHub is a consultant-led service providing a single point of referral for the diagnostic assessment of problems related to the urinary tract or reproductive system.

Symptomatic or concerned patients can see a consultant in a specialist urology clinic setting and undergo any necessary diagnostic assessments during the initial consultation, or soon after. Patients can be referred by their GP, or they will be triaged by a urology nurse if they self-refer.

We provide all standard tests including blood tests, cytology and urinalysis (a full list of services is on page 5). These will normally be carried out on the same day as the consultant appointment and we aim to discuss results or feed back to the patient on the same day – before they leave the clinic.

Our aim is to provide a fast diagnosis and expert opinion, together with any further investigative or treatment pathway, in which case patients will be offered a follow-up appointment.

We use the latest modalities, including specialist advanced diagnostics, which, depending on the symptoms and potential condition, include imaging such as mpMRI and PSMA PET/CT for the diagnosis of prostate cancer. All biopsies for suspected cancers are reviewed at a multidisciplinary team meeting which includes surgeons, radiographers, oncologists, pathologists and specialist nurses.

Patients are supported by a multidisciplinary team during their initial consultation and any further appointments to ensure a smooth transition from investigation to treatment if needed.

# Conditions treated

UrologyHub includes national expert providers who provide a comprehensive urology service, from screening and urinary issues to prostate disease and cancers. Patients may attend with symptoms, abnormal test results or general health concerns, or they may have a pre-existing condition or diagnosis.

We provide rapid access to many of the latest diagnostic techniques for urological conditions such as:

- Flexible cystoscopy
- CT scans
- MRI scans including mpMRI for prostate conditions
- PET/CT\*

Patients diagnosed with cancer can be referred directly to the GenesisCare oncology service, a world-class treatment pathway for urological cancers encompassing advanced radiotherapy and chemotherapy for the management of all stages of cancer. Through our Urology Reference Group, we can provide second opinions and innovative and proven treatment options, with therapy starting within days of diagnosis, or sooner, if clinically indicated.

## Treatment

UrologyHub provides rapid access to a comprehensive diagnostic and treatment pathway across all urological conditions. It comprises teams of nationally recognised urology surgeons and private practices to provide a streamlined multidisciplinary and multimodality service.

The service is underpinned by GenesisCare, the UK's leading private cancer network, ensuring a complete rapid access pathway for every patient.

Access to the UK's leading specialist cancer care provider

# Cambridge team

UrologyHub is consultant-led, comprising of nationally recognised urology surgeons supported by a dedicated on-site team. These surgeons have pioneered many innovative and proven treatments and together provide a broad service, such that patients can also be referred to an appropriate specialist at a convenient time. A full list of our clinicians is available on our website [genesiscare.com/uk/our-doctors](https://genesiscare.com/uk/our-doctors).

We operate as multidisciplinary teams (MDTs), which includes surgeons, radiologists, radiographers, pathologists and oncologists. This ensures the highest levels of clinical governance through a process of peer review.
